

## **Environment and Quality Policy**

Asebal is a company dedicated to the manufacture of hot dipped galvanized steel products and boasts various production centers and end product warehouses. As we are aware that all of our actions should be based on respect and commitment to the environment, we have adopted the current policy, which forms the basis of our Management System. Such policy has been specifically designed according to the nature, magnitude and impact of our activities and products.

At Asebal our main goals are customer satisfaction and the least impact on the environment as possible from our activities, products and services.

With this mind, our Management Team is committed to working towards the following goals:

- Implementation and maintenance of a Management System that allows us to control and reduce costs while improving efficiency in order to be a leader in the markets and regions where we are currently present.
- Manufacture products with the highest quality possible without making mistakes while complying with standards in a way that allows us to meet our customers' needs and gain total customer satisfaction.
- Make excellent purchase choices with the idea of offering a quality end product with the best profit margin possible.
- Comply with the applicable legal standards, legal requirements and any other requisite that our company is subject to.
- Reduce and minimize the effect of pollution caused by our activities.
- Offer training to all our staff in order for them to meet the requirements of each post. In this way, we aim to provide professional development and equal opportunities and motivate our staff to go about their work in an environmentally friendly manner.

With its commitment to continuous improvement, Asebal ensures that the Management System currently in place is audited and inspected periodically. Likewise, the importance of the role of quality in all of our business areas allows us to constantly detect improvement opportunities.
